

# Townley Pinch Valves

## Doesn't get much simpler than this!

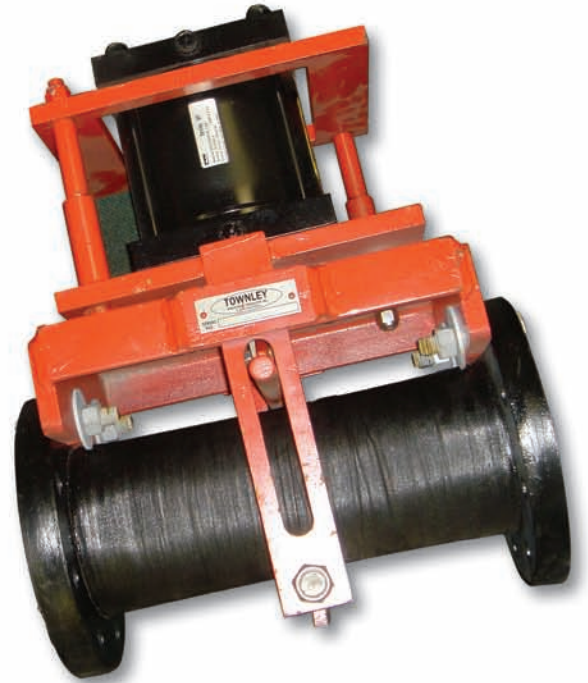

Designed with unique self-centering, double action pinch bars. These pinch tubes will wear uniformly as the throw is split 50/50, unlike the single sided compression bar of competitive valves.

Much simpler than the "air diaphragm" style and more adaptable to existing pipe runs.

Whether for isolation or throttling of slurries, this valve is a perfect solution.

- Suction or Discharge service
- Remote positioner or manual actuation
- Bi-directional application
- Great for chemical, mineral beneficiation, dredging, sand & gravel or power plant use

## Safety Cage

## Benefits & Features

### Safety

- Reinforced resilient fabric
- Simple assembly, perfect fit
- Safety cage included
- Pressure rating to 100 psi

### Versatility

- Bi-directional flow
- Suction or discharge service
- Up to 24" ID
- Minimum lengths 3X ID or custom
- Special ends to suit application
- Isolation or throttling service
- Available with pneumatic or electropneumatic positioners

### Positive Sealing

- Gum rubber lined
- Flanged ends, built in seal

### Long Service Life

- Wear tube to match application
- Abrasive and corrosive resistant
- Rotate tube for extended life

*Call or email us and an experienced Townley Technical Representative will work with you to specify the right valve and actuation for your application*
