

TOWNIPRENE® FLOTATION

Upgraded Wear Parts for Standard OEM Flotation Cells

Townley is the manufacturer of choice for many mining companies in North America. Flotation cell upgrades are available for phosphate, copper, silver, lead, zinc, and other mining applications where process efficiency and longer life between change-outs is vital. Switching to Townley will ensure that you will lower your “cost per ton.”

Working directly with mining operations, Townley pioneered the Towniprene® urethane formulation for flotation cells more than forty years ago. Upgrading from the OEM rubber materials, these engineered parts have provided improved wear life in all flotation circuits.

- Towniprene® urethane provides improved abrasion performance with fine feed found in the flotation process
- Towniprene® urethane is naturally resistant to the chemical degradation caused by reagents used in the separation process
- Perfect fit and simple robust construction means trouble-free service
- Metal inserts are integrated where mechanical strength is required

Many parts in stock. Call for Availability!

- Standpipes
- Skirts
- Stators
- Rotors
- Diffusers
- Impellers
- Dart valves and seals
- Piping
- Throttling valves

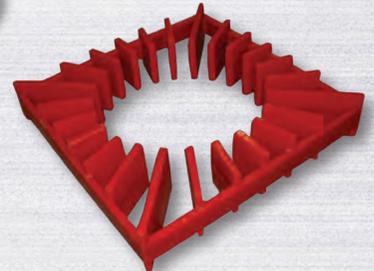

TOWNLEY

Engineering & Manufacturing Co., Inc.

WEMCO STYLE

Parts available for these models:
Attrition Machine #10, #56, #66, #66B,
#76, #84, #120, #144, #164 and #225

GALIGHER STYLE

Parts available for these models:
#24, #36 and #48 in standard impeller
and Chilli-X style with stabilizers
Agitair Series 100 to 500 cubic foot cells
Impellers and stabilizers

DENVER STYLE

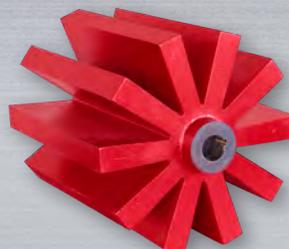

Parts available for these models:
D30, DF30, D24, DF24, DR24, D18,
DF18, DR18, D14, DF14, DR300, DR500

- Impeller
- Diffuser
- Paddles
- Hood
- Standpipe bell
- Dart valve
- Dart seat
